Profile

Flutter developer and coding mentor with hands-on experience building cross-platform applications using Dart, BLoC/Cubit, Firebase, Cloud Firestore and REST APIs. Contribute to Flutter and Dart learning modules at iSchool while leading and supporting coding instructors. Focused on maintainable architecture, reliable state management and practical user experiences.

Technical Skills

- Flutter & Dart | BLoC/Cubit | Provider | FlutterFlow | State Management
- Firebase Authentication | Cloud Firestore | REST APIs | Dio | Hive | SharedPreferences
- OOP | SOLID | Clean Architecture | MVVM | Design Patterns | Clean Code
- Git & GitHub | Android Studio | VS Code | Debugging | Java | Python | Data Structures

Professional Experience

iSchool

Aug 2024 - Present

Coding Mentor | Jan 2026 - Present

- Lead and support coding instructors through technical guidance, onboarding, session reviews and structured feedback.
- Contribute to Dart and Flutter learning modules and support mobile-development content using Flutter and FlutterFlow.
- Coordinate teaching-quality improvements and student case resolution; promoted to Mentor Rank 2 in Aug 2026.

Coding Instructor | Aug 2024 - Dec 2025

- Taught programming through practical projects, adapting explanations and learning plans to students' skill levels.

Selected Flutter Projects

E-Commerce App | Flutter · BLoC/Cubit · Firebase · Cloud Firestore

- Built Cubit flows for authentication, product browsing, favorites, cart, checkout and payment-method selection.
- Integrated email/password, Google and Facebook sign-in with Firebase and stored products, users and favorites in Firestore.
- Separated models, services, Cubits and views into reusable layers, with generated routing for main application flows.

News App | Flutter · BLoC/Cubit · Dio · NewsAPI

- Built a news app with top headlines, recommendations, article details and search using Dio and NewsAPI.
- Implemented loading, success and error states, cached network images, reusable widgets and typed API response models.
- Separated API services and Cubits from presentation in a feature-based codebase.

Habit Tracker | Flutter · Provider · Hive · Local Notifications

- Built offline habit creation, editing, completion and daily tracking using Provider and Hive.
- Added streaks, weekly analytics, charts and scheduled local notifications with permission handling.
- Designed a Material 3 dark interface with statistics views and empty-state handling.

Weather App | Flutter · BLoC · REST API · Geolocation

- Built weather retrieval using BLoC and separate repository and service layers.
- Added pull-to-refresh, detailed weather conditions and animated loading and error states.
- Integrated city search and device geolocation to retrieve live weather data.

Education & Training

B.Sc. Computer Science

Higher Technological Institute (HTI)

2018 - 2022

- Mobile Application Development Diploma - CLS (2021): Java Native and Flutter development, UI wireframes, debugging and application performance.
- Flutter Advanced - BLoC & MVVM Pattern - Udemy (2022): Cubits, blocs, providers, listeners, consumers and state-management patterns.
